

CTi® OTS

Just got better

The Off-The-Shelf brace that provides adjustability and an excellent out-of-the-box fit while offering the ultimate combination of stability and protection.

The rigid, carbon composite frame provides brace-to-bone contact which is crucial for maximum stabilisation of the knee joint.

Because of its rock-solid, carbon fibre frame, CTi provides the ultimate combination of stability and protection, for users that are just out of surgery or for those looking to defend their knee from potential ligament injury.

WHAT'S BEEN IMPROVED?

CTi ligament knee braces provide the ultimate combination of stabilisation and protection of the knee joint. This improved version offers additional features that increase durability, usability and compliance.

MORE DURABLE, ULTRA LOW-PROFILE HINGES

The anatomically correct Accutrac® hinge has been streamlined and strengthened resulting in a lower overall profile and improved durability.

FIELD SERVICEABLE D-RINGS

The internally mounted D-rings can easily be placed on either the outside or the inside of the frame, or any combination of both.

TRIMMABLE STRAPS

To further optimise the brace fit and suspension, the strap lengths can easily be customised. Simply trim straps to desired length and reapply the hook and-loop alligator clip.

EXTERNAL ATS STRAP

Having the Adjustable Tibial Strap externally mounted improves the donning and adjustability.

MATTE FINISH

The colour of CTi OTS has now changed to have a nice matte finish.
